Stone Steps Webalizer (v3.10.2.5)

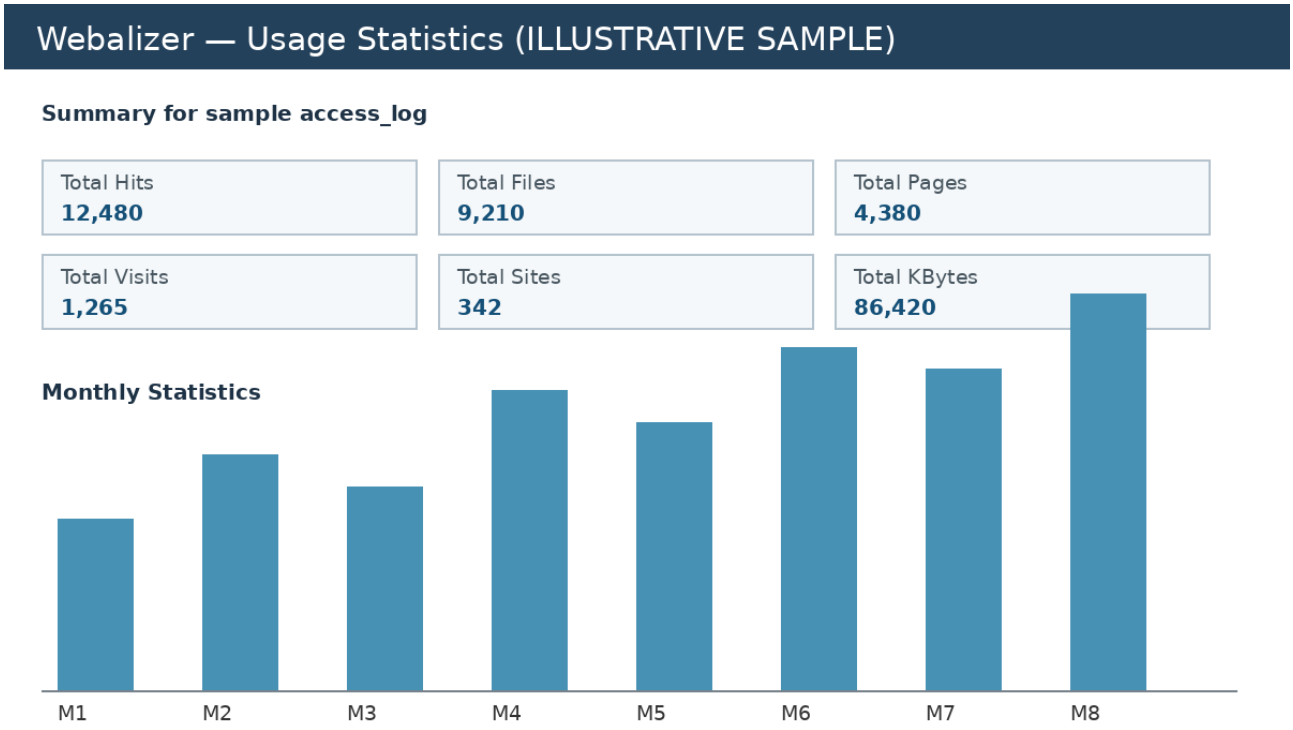

Practical 15 — Webalizer Output and Result

AIM: To analyze different types of web logs using Webalizer tool.

PROCEDURE

1. Launch Webalizer for Windows. 2. Select a valid web server access log file. 3. Set the target output directory. 4. Click Run Webalizer. 5. Open the generated HTML report in a browser and inspect monthly statistics, hosts, URLs, referrers, and user-agents.

SAMPLE OUTPUT SCREENSHOT

Note: This is an illustrative sample report layout, not a screenshot from a live Webalizer run. Your figures will depend on the log file analyzed.

Result: Webalizer processes the access log and generates HTML statistics that can be used to analyze website traffic, requests, visitors, and user-agent information.
